EDUCATION

Brigham Young University Apr 2028
Bachelor of Science: Computer Science Provo, UT
Minor in Mathematics and Cybersecurity

- GPA 4.00
- BYU Heritage Scholar Full Tuition Scholarship + CS Endowed Scholarship
- Relevant past and current coursework: Advanced Software Construction, Multivariable Calculus, Data Structures and Algorithms, Discrete Structures, Computer Systems, Web Programming, Introduction to Artificial Intelligence.

Languages: Fluent in French.

EXPERIENCE

IInui Travel Aug 2026-Present
Cofounder Provo, UT

- Designed and am implementing the entire stack for a Polynesian tourism business as a solo developer.

BYU Internet Security Research Lab Jan 2026-Present
Research Assistant Provo, UT

- Directed one of the recent projects, which included orchestrating a team of 6 researchers.
- Analyzed over 100 academic papers to find known vulnerabilities in the FIDO2 protocol.
- Recreated several attacks on FIDO2 and implemented a mock web application supporting the protocol.

BYU Computer Science Department Jan-Jun 2023, Sep-Dec 2025
Teaching Assistant - CS 111 (Introduction to Computer Science) Provo, UT

- Led lab sessions twice a week for 100+ introductory computer science students.
- Contributed to and helped develop several weeks of the course.

VOLUNTEER EXPERIENCE

BYU Association for Computing Machinery Dec 2025-Present
President

- Planned and carried out large-scale networking events to connect recruiters and students.
- Created a new website from scratch and integrated it with BYU's new Kubernetes cluster.

BYU Kids Who Code Nov 2025-Present
Program Director Provo, UT

- Volunteered weekly at local elementary schools and community centers to teach beginner coding classes.

SKILLS/PROJECTS

Technical Skills: Python, TypeScript, HTML/CSS, Java
Soft Skills: Excel in teamwork, collaboration, and communication
Projects:

- RateMyClass
  - A website allowing students to write reviews of BYU classes.
  - Typescript, React, Node Express, MongoDB, AWS + Digital Ocean.
  - Gave me crucial experience in designing, implementing, and updating a larger project. Originally written in vanilla JS/HTML/CSS, I rewrote it several times while iteratively updating it with the technologies listed above and deployed it to two different hosting services for practice.
- Chess
  - A full-stack chess application including two adversarial search agents to play against.
  - Java, Javalin, MySQL, PyTorch.
  - Provided my first large-scale exposure to designing custom full-stack applications. I coded the entire infrastructure, asked an LLM to review and critique it to learn good coding practices, and then researched AI fundamentals in order to create two agents, one using a traditional heuristic function and one using a PyTorch model I trained.
